

Amparo AI

Demo Script | 2.5 minutes

Phone: +1 (415) 417-6002

BEFORE YOU START

- [] Agent running: `uv run python src/agent.py dev`
- [] Panel open: `localhost:3000`
- [] Screen recording: ON
- [] Phone: charged, silent, notifications off
- [] Panel shows: "Waiting for a call..." pulsing dot

Numbers to know cold:

PPO (winner): ~\$20,675/yr

CCHP (trap): ~\$42,877/yr despite \$990/mo premium

Delta: CCHP costs Maria \$22,000 MORE per year

[0:00 - 0:25] HOOK - Narrate, no call yet

[NARRATE] Show panel in "Waiting for a call" state.

"Every year, 150 million Americans pick a health plan in under 10 minutes. Studies show the majority pick the wrong one - the cheapest-looking plan that ends up costing tens of thousands more.

The tools that exist today either can't talk, or just route you to a human. Nobody fuses live voice with real-time, personalized, multi-plan comparison. Until now.

This is Amparo AI. Let me show you what happens when Maria calls."

[0:25 - 0:50] TURN 1 - Maria's Ask

CALL +1 (415) 417-6002

Say to agent:

"Hi, I'm pregnant and due in March. I take Humira for my arthritis, and I really want to deliver at UCSF Medical Center. Can you compare my plan options and tell me which one actually makes sense for me?"

While agent responds, narrate:

[NARRATE] Watch the panel. 28 Moss queries just fired simultaneously across 4 real Covered California plans. Premium, deductible, OOP max, Humira formulary, UCSF network status - all in parallel, under 100 milliseconds.

When trap banner appears, narrate:

[NARRATE] The agent found the trap. CCHP looks cheapest at \$990 a month. But UCSF is out of network - that \$25,000 delivery cost sits outside the OOP maximum. It doesn't get capped. Maria pays it on top of everything else. The PPO - which looks more expensive - costs \$22,000 LESS per year.

Point to citation chip, narrate:

[NARRATE] Every fact is cited. Click that chip - it opens the actual Covered California PDF. Not AI-generated. The real insurer document.

[0:50 - 1:10] TURN 2 - Clinical Guardrail

"What's the right dose of Humira for someone who's pregnant?"

[NARRATE] That fired before the LLM even saw the message. A deterministic regex - no AI, no latency, no hallucination risk. In healthcare you cannot let an AI guess on clinical questions. So we don't. Instant. Absolute.

[1:10 - 1:35] TURN 3 - Curveball

"Actually - what if I also want to see doctors at Stanford?"

[NARRATE] Humira still remembered. UCSF still remembered. Stanford merged in. Re-fired all queries - re-ranked in real time. Nothing dropped. This is what year-round benefits navigation looks like - not a static brochure. A live conversation.

HANG UP.

[1:35 - 2:00] MOSS PUNCHLINE - Narrate to camera

"Here's why Moss is irreplaceable.

We needed 28 precise facts across 4 plans in under 100 milliseconds - on a voice call where silence kills the experience.

A normal vector database: 350ms per query. 28 queries sequentially: 10 seconds of dead air. Voice agent dies.

Moss in-process retrieval: 3 to 10ms per query. All 28 fire simultaneously. Total wait equals the slowest single query.

And the numbers were NEVER computed by AI. The LLM extracted what Maria said. Moss retrieved the facts. Plain Python did the math. That's the only way to build something trustworthy when being wrong costs someone \$25,000."

[2:00 - 2:20] CLOSE - Narrate to camera

"58% of insured Americans hit a coverage problem every year. 45% get a bill they thought was covered. Employers spend billions on benefits nobody understands.

Amparo is a year-round benefits concierge. Employer pays. Employee calls anytime. Open enrollment is the wedge.

The number is live right now. Try it: +1 (415) 417-6002

LiveKit for voice. Moss for retrieval. Unsiloed for citations. MiniMax for 40 languages.

This is Amparo AI."

[2:20 - 2:30] OPTIONAL - Spanish Beat

"Hola, estoy embarazada y tomo Humira. Puedes comparar mis planes de salud?"

[NARRATE] Same agent. MiniMax auto-detects Spanish, responds in Spanish. No switching, no separate model. The access story - built in.

KEY NUMBERS

Plan	Monthly	Annual (Maria)	
Blue Shield HDHP PPO	\$1,473	~\$20,675	WINNER
CCHP Bronze HMO	\$990	~\$42,877	TRAP
Kaiser Gold HMO	\$1,392	~\$44,705	TRAP
Blue Shield Trio HMO	\$1,163	~\$66,960	TRAP

CCHP costs \$22,000 MORE than PPO because UCSF is out-of-network and that \$25,000 delivery cost is NOT capped by the OOP maximum.

IF SOMETHING BREAKS

Total failure -> PLAY THE BACKUP VIDEO

You built something real. Go show it.
